## Squirrel Nest Box Plans:

This simple plan calls for a single plank of wood 1" x 10" x 8'. Assemble using stainless steel screws, hinges and a hook to lock the top closed.

A rough cut wood that weathers well, such as cypress, cedar or redwood is preferred, since the box should remain unpainted.

This type of box will also accommodate eastern screech owls or kestrels.

PRWC uses many of these boxes every year as our juveniles reach the age of release. We take the boxes that they are accustomed to sleeping in to their new home and leave them there so the babies have the familiar comfort and safety while adjusting to life in the wild.
